- $C_{20}H_{12}O_5$ M 332.312
 Fluorescent dye with numerous applications, e.g. as water-flow tracer and in cosmetics. Used as an adsorption indicator in the titration of Cl^- , Br^- , I^- , SCN^- and as a fluorescence acid-base indicator (pH range 4.0-4.5 → 6.0; colour change pink/green → green). Used for photometric detn. of I_2 . Exists in at least two forms, yellow amorph. and red cryst., possibly also in third, orange, modification. Structure assignments may not be certain.
